

The Trip

On Tuesday 9th of June we went to the new Glencorse water treatment works. It was absolutely massive! We enjoyed every minute and by the end we were full of facts.

We saw four very big cranes, then we five big excavators.

My class got split in to three small groups. I was in Mrs Stewart's group.

Then after that we got to look through a cool camera. It would tell the man if something was in the wrong place!

P4a and Miss Milne went and enjoyed it. The roof was made of grass so it would look like a normal field! It was planned from top to bottom. I was loving it but in the end it was time to go.

We hopped on the bus and went to the pipe factory. It smelt very weird. When we got in Lynsey showed us what the plastic pipes were made of. I liked this as well as the water treatment works.

It really helped our topic! Now our heads are full of facts.

We got the bus and after that we had lunch. Then we went pond dipping and I caught a fish! I loved it. Just then we took a little walk beside the Pentland Hills and finally got the bus back home. What a day!
